Variogrid product tray Comp 13/14 - 600 x 400 mm - for pins and dividers

Product specifications

Uitwendig (LxBxH)	600 x 400 x 13 mm
Material	Comp 13/14
Article number	53.VG.600.400
Weight (kg)	1,6 kg
Temperature range	Depending on the entire cleaning process, ask our product specialists for the exact specifications.
Color	Black
Bottom	Open

Properties

Product tray made of reinforced polyamide in Euronorm size 600 x 400 mm, but also available fully customized.

For a trouble-free and scratch-free cleaning of high-quality parts.

Also extremely suitable for safe transport and trouble-free storage of these components.

Significant cost savings as there is no need for repacking between cleaning, transport, and storage.

Flexible layout of the product tray using plastic pins and strips.

The layout of the grid-shaped base plate can be variably designed and changed at any time.

Safe positioning of metal parts thanks to the custom layout.

Optionally available with stacking pins for stable stacking of multiple Variogrid trays.

The open construction provides maximum accessibility for the cleaning agent.

The Variogrid is very stable and has a high load capacity, and moreover, it has a low own weight.

Made of reinforced polyamide and suitable for many chemicals. Testing under practical conditions is necessary. Ask our product specialists for the exact specifications and possibilities.

Various parameters play a role in temperature resistance. Ask our product specialists for the exact specifications.

The Variogrid product tray is also easy to integrate into existing systems, such as metal wire baskets, KLT containers, and steel boxes.

Available with handles in multiple sizes for easy and practical handling.

Due to the Euronorm size 600 x 400 mm, it is stackable on all common Euronorm stacking containers and crates.

Description

Variogrid is a product tray made of compound 13/14 plastic for cleaning delicate parts, sized 600 x 400 mm. The plastic product tray from the Techrack Variogrid series is designed for cleaning, transporting, and storing high-quality metal parts. The system consists of a grid-shaped base plate on which an exactly fitting layout can be attached with plastic pins and strips. The layout of the product tray is variable and can be changed at any time. The pins and strips ensure that metal parts are well-centered on the Variogrid for thorough and safe cleaning without the risk of scratching. The Variogrid system is made of special plastic and is suitable for many chemicals. The plastic product tray has a standard Euronorm size of 600 x 400 mm but can also be custom-made. This makes the Variogrid system easy to integrate into existing cleaning systems. Variogrid can be used as an independent product carrier or as an interior in existing metal wire baskets, KLT containers, and steel boxes. Metal parts are then optimally protected against damage without having to deviate from an existing logistics system. Variogrid product trays are stackable without any problems thanks to orange stacking pins. These can be applied anywhere on the base plate, ensuring that stacking of trays is always possible. Comp 13/14 plastic is developed for industrial component cleaning. It is suitable for cleaning processes with water/soap, organic solvents, and alcohol (IPA). The material can be used perfectly in ultrasonic cleaning installations. Not suitable for use with acids or should otherwise be tested extensively at very low dosages first.
